

SPORTSWEAR INDUSTRY

All products assigned to this sector are:

- Loop circular fabrics for wristband and knee guards.
- Circular fabrics for Jockey socks.
- Circular fabrics for fashion and sportswear.
- Cut tapes for confection of complementary articles.
- Tubular fabrics for glove cuffs.
- Nets for sportswear and construction complements.

Loop circular fabrics for wristband and knee guards

Fabrics with compressive functions and high absorption capacity, due to the inherent loop they have.

Tubular fabrics with possibility of elastic weft insertion, optimising their compressive effect, being very used in sports practices, by their direct application on articulations as the knee, elbow and ankle. They are also very used in muscular recuperation processes and also with orthopaedic treatments. Tubular fabrics of rib fabric produced on weft circular machines, with mixture of different yarns: polyester / polyamide and recovered elastic number 90.

Circular fabrics for Jockey socks

Although this is a very concrete and exclusive product for practising jockey, we would like to mention that although this is a rib and tubular fabric, the diameter decreases in the superior part for a better comfort during the practice of this sport.

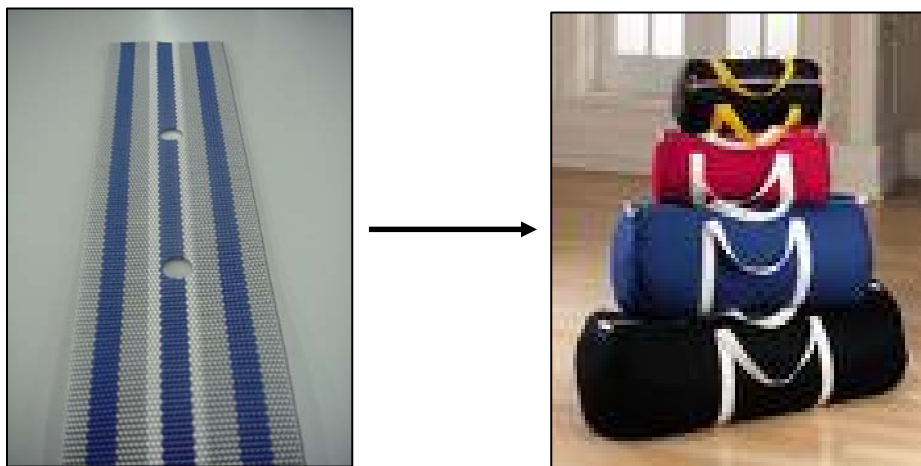

Circular fabrics for fashion and sportswear

Although these are elements used in confection, we have considered including them in this sector by their different possibilities of sun and thermal protection and also compression in some cases.

Cut tapes for confection of complementary articles

Our automatic cutting machines allow cutting all kind of tapes in hot and cold. With possibility of horizontal and inclined cut and also, with predetermined options, the realisation of forms as holes and incisions on the fabric.

Tubular fabrics for glove cuffs

Rib tubular fabrics of small diameters, with compression and used for glove sleeves for security and fireman staff.

Nets for sportswear and construction complements

Nets produced with any type of fibre as: polyester, polypropylene, covered and elastic yarns.

Their applications are, among others:

- Protection for building
- Protection for children.
- Nets for sport activities.

Nets produced in our double needle bed electronic machines and also on our circular machines, allowing the previous design of the measure and regularity of the fabric formations, according to the final purpose of the fabric.
