

PACKAGING INDUSTRY

All products assigned to this sector are:

- Cords for applications in handles for bags.
- Elastic cords for packing in means of transport.
- Circular meshes for decoration of bottles.
- Circular meshes for packing of toys.
- Tubular fabrics for packing guns and similar.
- Flat meshes for palletising and different packing.

Cords for applications in handles for bags

The packing sector is suffering constant changes in presentation and forms. Profiting the great versatility of our needle braiding machines and also the large possibilities of application existing in the packing sector, there is the use of cords as handles for bags, profiting their better touch to subjection and also the better appearance and weight resistance.

Elastic cords for packing in means of transport

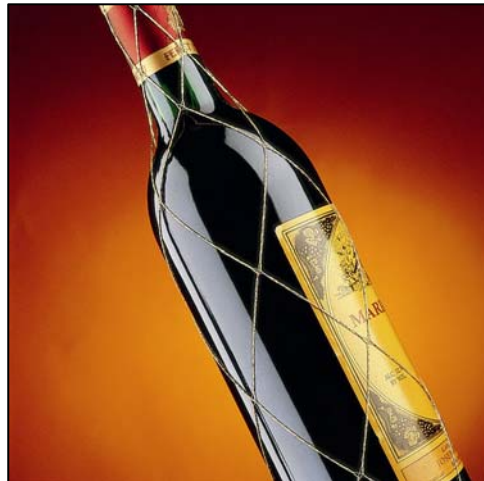

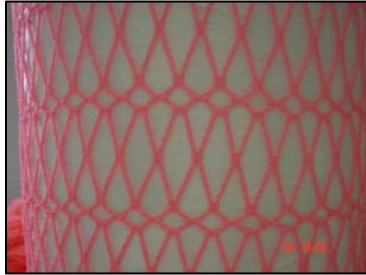

Another of the applications in our large range of cords produced on our needle braiding machines, are the elastic cords with great resistance to traction, applied to subjection and contention of the elements transported by trucks, motorbikes, bikes and cars.

Circular meshes for decoration of bottles

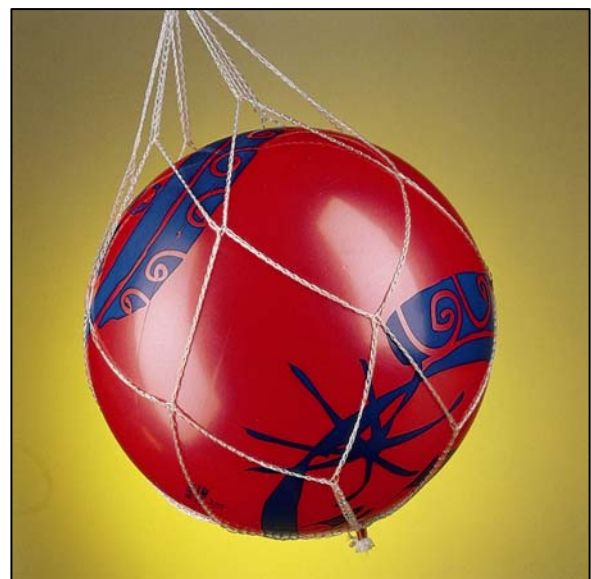

The packing, a part from its own utility, it is also a potential element of the packed product, being an example the case of decorative meshes for bottles principally and that some trade marks which have used them historically, have become integrally recognised for the packing a part from the excellent quality of their product.

Meshes produced on our electronic circular machine.

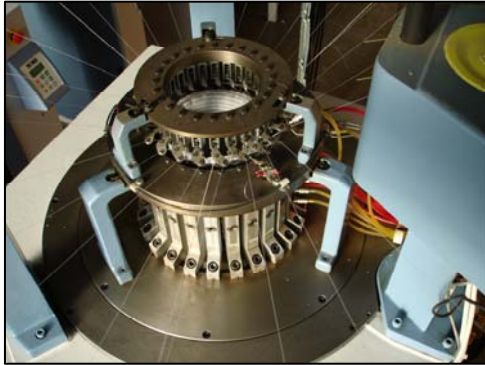

Circular meshes for packing of toys

Another of the characteristics of the textile packing, it is its functionality and also its decorative effect, having these two characteristics in the case of toys packing and other elements of small volume.

Tubular fabrics for packing guns and similar

Tubular fabrics with double needle bed assigned to a concrete packing as guns and similar. In this case a part from being used as element for transport and protector, we have to emphasize the additional value we are giving to the product.

Flat meshes for palletising and different packing

Another of the most used applications of the textile fabric in the packing industry is the case of the film for palletising, emphasizing the following aspects to have into account in this kind of application:

- Transparency with option of seeing the internal contents.
- Ventilation of the product as the mesh is external, important element in case of perishable goods and requesting ventilation.
- Strong resistance of the mesh in order to protect the packed product.

This film is produced from polyethylene film, cut and knitted later on a crochet machine, specially designed for this function.
